Deploy Microservices

The BucStop app, micro server repo, and API Gateway all exists in their own containers. Running the micro container or the API container without the BucStop app results in the following webpage:
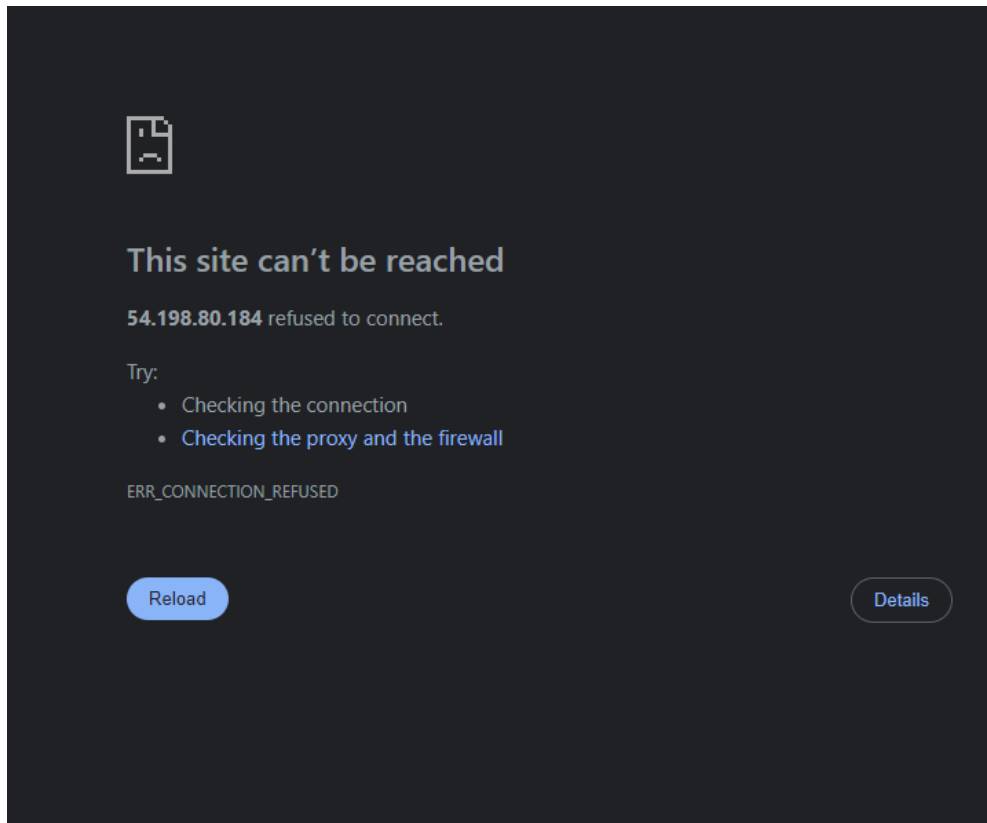

I believe this is because the microservices / API gateway do not contain any sort of application code yet, just data for the games.

In the process of doing this, I also found that I was missing an image inside of the docker-compose.yml file that was not pushed to the previous teams GitHub by watching the following video.

https://www.youtube.com/watch?v=DQCUL9RFFG0&list=PLxsGO-QGipWmVzxFkVbA-o6BUW5eRdk3H&index=1

Even with the 3 containers running, as seen here, the micro services do not appear to be functional.
